**MIGRATION FROM SITEMINDER
AND INNERWEB AUTHENTICATION
TO THE NEW UMD AUTHENTICATION
(LOGIN.UTAH.GOV)**

Issue Date: April 15, 2004
Effective Date: April 15, 2004
Section/Group: ITS Authentication Group and Operations
Submitted by: Darrus McBride
Approved by: Darcie Trimble

ITS has successfully used SiteMinder and Innerweb Authentication for several years. As with most applications, these products have become dated, and a new, more reliable authentication infrastructure has been installed. The new environment consumes the data store of UMD and couples an updated version of SiteMinder with other applications to provide authentication for customer applications.

Beginning immediately, ITS is working toward migrating the ITS Innerweb, along with all other ITS applications, to login.utah.gov. ITS has contacted customers currently using the old SiteMinder authentication to verify their use and will begin working with these customers to assist in migrating their applications to login.utah.gov. The migration process may take several months to complete. At that time the old authentication environment will be sunset.

Also, beginning immediately, all new applications will be implemented using the new authentication environment, using the utah.gov domain.
